Optimize Your Warehouse Operations With a Comprehensive WMS Solution

Whether you are running a single distribution center, or multiple sites, LISA WMS is the key to streamline your inbound and outbound supply chain. Designed for SMBs and seamlessly integrated with SAP Business One, LISA is the ultimate tool to control, optimize and automate your warehouse operations. From container receiving, to lot tracking, to order fulfilment, and shipping, LISA WMS got you covered.

A proven WMS solution that has been installed globally, LISA WMS helps companies in the following critical operational areas:

- Improve inventory visibility and reduce carrying costs with real-time, high quality information on inventory that is in-bound, in-process and at a warehouse, zone, and bin level across the entire enterprise.
- Increase control over warehouse management functions such as cycle counting, inventory moves, warehouse transfers, physical counting and warehouse space optimization.
- Increase warehouse productivity with system directed put away, picking and cycle counting processes.
- Support remote warehouse locations or 3PL's with LISA's web based transaction interface. Provide the tools for remote warehouse personnel to make real-time transactions for inventory movements.
- Take advantage of plug-and-play integration with EDI and Shipping solutions to streamline and compress your companies Order to Cash cycle to increase cash flow, reduce returns and optimize your inventory.

Warehouse Configuration

- Support single or multiple physical and virtual warehouses
- Define zones and storage types
- Random or fixed locations by SKU
- Location configuration with capacity and velocity management
- Optimize travel with user defined travel sequences by location
- Configure replenishment strategies

Order and Warehouse Workload Management

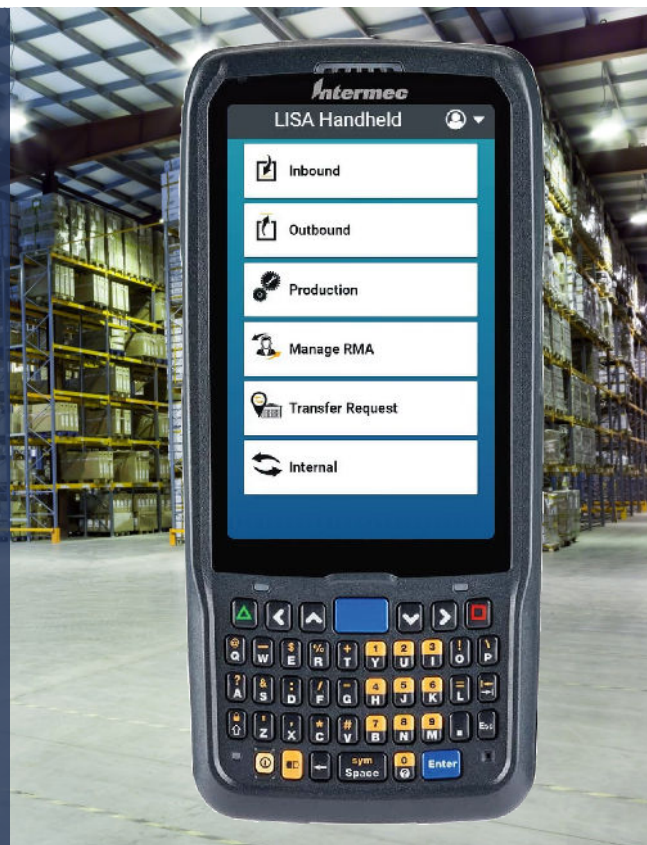

- Single user interface to manage, prioritize and dispatch orders
- Hard allocation support
- Real time fill rate calculations
- Unlimited user defined fields for enhanced filtering & grouping.
- Automated cross docking
- Creation of batch and bulking picking groups

User-Friendly Interface

Data is only useful if it is real-time and accurate. LISA WMS provides an automated radio frequency based data collection process that is as easy to use as it is accurate. Built with Web Browser based technology, it runs on Windows Mobile technology.
